Young People’s career expectations -

and their impact on the transition to adulthood

Ingrid Schoon - Institute of Education, University of London

Education and Employer’s Taskforce
London, 23 May 2013
Teenage Career Expectations

• Adolescence critical phase (Erikson, 1968; Stettersten et al., 2005)

• Decisions about future (Gottfredson, 1981; Eccles et al., 1993; Nurmi, 2004)
  – Life planning
  – Direction for future transitions
  – Investments

• Long term consequences
  – Influencing consequent behaviour
Aspirations and Expectations

• Aspirations
  – strong hope or wish for achievement or success

• Expectations
  – realistic evaluation and predictions

→ Expectations better predictors of future accomplishments

(Hanson, 1994; Marini, 1978; Schoon, 2006)
Teenage Life Plans

- Develop and change over time
  - circumscription and compromise (Gottfredson, 1981, 2006; )
- Are influenced by personal interests, values, self concepts, capabilities
- Are shaped by significant others (parents, peers, teachers, socio-cultural context)
- Depend on available opportunities
Theoretical Framework

  – Multiple interacting influences
  – Importance of formative years
  – Plasticity of development
  – Human agency
  – Co-regulation
  – The relevance of a changing context
Aims of the Presentation

• What are the expectations young people have regarding their educational and occupational pathways?
• Have these aspirations changed over time?
• What are the predictors of teenage expectations?
• What are the associated outcomes?
DATA

• 3 British Age Cohorts
  – 1958 National Child Development Study
  – 1970 Birth Cohort Study
  – 1989/90 Longitudinal Study of Young People in England (LSYPE)
Three National Age Cohorts: Historical events

1958 National Child Development Study (NCDS): n=17,5

Birth  Age 7  11  16  23  33  42  46  50  54

1970 British Cohort Study (BCS70): n=16,571

Birth  Age 5  10  16  26  30  34  38  42

LSYPE: n=21,234

Age 13  14  15  16  17  18  19

Era of liberalisation
Revival of Feminist movement
End of baby boom
Oil crisis
New technologies
Onset of recession
IT boom
Credit Crunch
Collapse of housing market
Second wave of recession
Onset of recovery
Changing Global Context

- **Increasing education participation**
  - Aspirations for college became increasingly the norm (Rosenbaum, 2001; Reynolds & Pemberton, 2001; Schneider & Stevenson, 1999; Schoon, 2010)

- **Changing labour market:**
  - Changing occupational opportunities
  - More complex and protracted career routes

- **Changing economic climate**
Educational expectations of young people: % expect further education

Males
Females

Aiming High: Why have expectations increased?

The ambitious generation (Schneider & Stevenson, 1999; Reynolds & Pemberton, 2001; Rosenbaum, 2001; Goyette, 2008):

→ A new norm: Further education for all?
• Changing social backgrounds
• Changing parental expectations for their children
• Increased gender equality
• Increasing investment in education (school engagement)
• Changing occupational structures
Parental educational expectations for their child
% expect further education

- Males
- Females

Education Expectation

School Motivation

Parental expectation

Age 10

Age 16

Schoon, 2010
Why have expectations increased?

- Reduced association with parental social status
- Association between academic attainment and education aspirations has also reduced
  - Findings suggest new norm for higher education, independent of social background and ability
- Association between school motivation, parental expectations and education expectations of young person has also reduced
  - Finding suggest that parent-child interactions are important, yet less so in later born cohort, and that young people expect to continue in school, even if they do not like school
Predictors and correlates of career expectations

- Gender
- Ethnicity
- Parental social status
- Previous academic attainment
- Self concepts and values
- Significant others (parents, teachers, peers, mentors, role models, ...)
- Socio-cultural context
- Education and employment opportunities
Linking career expectations to adult outcomes

- High career expectations are associated with educational achievement, occupational prestige and wage attainments in adulthood (Clausen, 1993; Sewell & Hauser, 1975; Schoon & Parsons, 2002; Melo, 2008)
- Applies for both men and women, and after controlling for academic ability and family background
- Domain specific prediction: e.g. Pathways into science occupations; entrepreneurship
Pathway Model predicting occupational transitions
(BCS70: Men/Women)

Model Fit: Men: CFI=0.984; rmsea=0.032 / Women: CFI=0.989; rmsea=0.024

Schoon et al., 2007
Predicting SET careers by SET aspirations

- Odds Ratios:
  - NCDS men: 5.17
  - BCS70 men: 6.36
  - NCDS women: 17.59
  - BCS70 women: 19.70

Schoon et al., 2007
Developmental-Contextual Model of Entrepreneurship:

Schoon & Duckworth, 2012
Changing Global Context

• Changing labour market:
  – Increasing demand for highly skilled labour force
  – More complex and protracted career routes
  – Likely to generate uncertainties (Kalleberg et al., 2000; Blossfeld et al., 2005)
  – Unaligned ambitions (Schneider & Stevenson, 1999;)

• In liberal market economies (US, UK): absence of institutionalised connections between school and work
Uncertainty in career expectations

• Role of high aspirations as predictors of adult outcomes well documented
• Yet: relatively little knowledge about consequences of uncertainty in aspirations and expectations
• Uncertain aspirations: young people who do not know what they would like to do in the future regarding their education or career
## Uncertainty in Aspirations at age 13/14

(in %)

Predicting uncertainty in aspirations

Higher levels of uncertainty associated with:

**Education aspirations**
- gender (male)
- low social family status
- ethnicity (white)
- low academic attainment (reading [esp. for males])
- low academic self concept (math)
- low school motivation (esp. for males)
- low parental aspirations

**Job aspirations**
- gender (male)
- ethnicity (non-white)
- academic attainment (high math and low reading for females)
- low academic self concept (math and English)
- low school motivation
- high parental aspirations (esp. for males)
- not using career advise
Outcomes of uncertainty in aspirations

- Risk of floundering (Kerckhoff, 2004; Schneider & Stevenson, 1999; Yates et al., 2011; Staff et al., 2011; Sabates, 2012)

- Identity exploration a formative period for adolescence and young adults (Arnett, 2004)

Summary

- Young people have become more ambitious in their career expectations
- Career expectations are shaped by multiple influences from the wider socio-cultural context
- Females generally more ambitious than males
- Teenage career expectations are linked to adult outcomes
- Current cohorts encounter a prolonged period of career exploration and increasing uncertainty
- Uncertainty not necessarily a bad thing
Conclusion

- Domain specific processes
  - Career routes – career choice takes place at later age and has potentially become more complex
  - Education participation and engagement during early adolescence vital for later attainment
  - Uncertain job aspirations can bring educational benefit, prevent foreclosure

- Important role for parents and educators to give advise, guidance, support

- Attention to cultural stereotypes: gender roles, ethnic identity, activity stereotypes
Thank you

I.Schoon@ioe.ac.uk
